HAEMOGLOBIN TESTING FOR PREGNANT WOMEN

A haemoglobin test measures the amount of haemoglobin in your blood. Haemoglobin is a protein in your red blood cells that carries oxygen to your body's organs and tissues and transports carbon dioxide from your organs and tissues back to your lungs. Measuring haemoglobin and haematocrit is common during pregnancy. Normal level of haemoglobin is 12 to 16 grams per decilitre for women of childbearing age. Its minimum normal value is 11 grams per decilitre in the first and third trimester of the pregnancy and 10.5 grams per decilitre in the second trimester.

On 18-06-2018 organized a special camp on Haemoglobin testing for pregnant women at Rayakuduru panchayat. Here our biochemistry students and staff were collected 20 blood samples from the pregnant women and tested Hb levels of their samples. 5 women were identified low level of Hp. Our college Life Sciences department students guided to eat HB rich food.
